

**AMENDMENTS TO THE SPECIFICATION**

Please revise the Abstract of the Disclosure as follows:

~~The present invention provides a~~ A ~~makeup mirror unit which is easy to use~~ includes a  
pair of sub mirrors and a pair of rack portions. In order to take goods from the rack ~~portion 7~~  
portions, the sub ~~mirror 10 is~~ mirrors are rotated inwardly around ~~the shaft 30a~~ shafts of the  
~~hinge 30~~ first hinges. In order to ~~use as a matched mirror~~ match the sub mirrors together, the  
sub ~~mirror 10 is~~ mirrors are rotated toward the front side together with the ~~frame 9~~ frames  
around ~~the shaft 31a~~ shafts of the hinge 31 which is second hinges which are attached to the  
opposite ~~end to~~ with respect to the ~~hinge 30~~ first hinges. When the left and right sub mirrors  
~~10, 10~~ are opened, and the side ends of the sub ~~mirrors 10~~ mirrors are adjacent with respect  
to each other in a state where the left and right sub mirrors ~~10, 10~~ are positioned in the front  
center portion of the makeup mirror unit, by connecting the ~~magnet 51~~ magnet and the  
magnet ~~receiver 52~~ receiver to each other, the sub mirrors can easily be connected in the  
center to be in the same plane, ~~and the user friendliness can be improved.~~

**Please revise the paragraph beginning on page 10, line of the specification as follows:**

By limiting the rotation angle  $\alpha$  of the frame 9 as mentioned above, it is possible to prevent the sub mirror 10 from moving toward the main mirror 11 farther than needed, and also prevent the main mirror 11 from being damaging by the back surface of the sub mirror 10. Accordingly, a user can move the sub mirror 10 in front of the main mirror 11 comfortably.
